INTRODUCTION TO APPENDICES

APPENDIX A: Birthdates of Professionals.

All 1411 charts sorted by date of birth. Given as DAY, MONTH, YEAR, NAME; e.g., 11 Apr 01 is 11 April, 1901. All births are in 20th century.

APPENDIX B: Professions.

All names listed alphabetically, grouped according to professional groups. The initial numeral designates whether the data and planet positions are to be found in the first (1) or second (2) part of the book.

APPENDIX C: Diurnal Positions of Planets.

The position of each planet for each individual is given in terms of 36 "Gauquelin sectors," that is, divisions of the diurnal movement of the planet expressed in thirty-sixths of the circle. Sectors 1, 2 and 3 roughly correspond to Placidus house XII; etc. Initial numeral again designates whether the natal data are given in the first (1) or second (2) part of the book.

APPENDIX D: Diurnal Positions in 360° Format.

The Moon, Venus, Mars, Jupiter and Saturn (the five planets for which the Gauquelins have found statistical results). These degree designations are measured **clockwise** from the Ascendant; thus, 0° = Ascendant, 90° = Midheaven, 180° = Descendant, 270° = Imum Caeli.

APPENDIX E: Tropical Longitudes of Planets & Angles.

Factors sorted by Tropical longitude are the Sun, Moon, Mercury, Venus, Mars, Midheaven and Ascendant.

APPENDIX F: Lunar Phase.

The Moon's elongation is given for each of the 1411 individuals (Moon's longitude minus Sun's longitude).

1411 Famous Americans' Horoscopes!

This is the most valuable reference on American birth data in existence. It contains birth certificate natal data and planetary positions for over 1400 notable American actors, sports figures, politicians, writers, artists, scientists, astronauts, military figures, business executives and more! Most of this information has never been published before.

Over 500 horoscopes are given in wheel format along with character traits extracted from the biographies of these eminent Americans. Longitudes of the planets, Ascendant and Midheaven are provided for almost 900 more notables along with their birth data and professions.

Several appendices tabulate useful information for further research and personal investigation. Exact Tropical degree, sign and minute for the Sun, Moon, Mercury, Venus, Mars, Midheaven and Ascendant are listed in zodiacal order. All 1411 charts are sorted both by date of birth (in chronological order) and by profession. Most important, every planet is catalogued by its "Gauquelin sector" or diurnal position, its measurement used to isolate astrology's most dramatic and important statistical results.

No name exceeds that of the Gauquelins in the area of astrological research. Their alliance with the quality computer horoscope calculations of Astro Computing Services ensures an unexcelled reference volume.
